## *Declaration*

I do hereby declare that this thesis entitled "**Business Process Improvement in Indian Industries Through Statistical Techniques**" is a bonafide record of the research work carried out by me during the course of research and that the thesis has not previously formed the basis for the award of any degree, diploma, associateship, fellowship or other similar title or recognition of any University or Society. I also declare that to the best of my knowledge and belief it contains no materials previously published by any person, except where due references are made in the text of the thesis.

Associate Professor

Research & Postgraduate Centre in Statistics

Nirmala College, Muvattupuzha

## *Certificate*

This is to certify that the thesis entitled "**Business Process Improvement in Indian Industries Through Statistical Techniques**" is a record of bonafide research carried out by Gijo. E.V. under my supervision in the Department of Statistics, Nirmala College, Muvattupuzha and that no part of this work has formed the basis for the award of any Degree, Diploma or other similar titles of this or any other University or Society.

**Dr. Johny Scaria**

(Research Guide)

## Abstract and Keywords

**Abstract:** In the present scenario of economic and competitive pressure, it is essential that industries have business processes that can be designed, developed, and implemented quickly. In order to remain successful in this complex, competitive, and global world of business we have to find out ways to significantly accelerate productivity, as the pace of business continues to rapidly change year after year. In this context, the main objective of this work is to study application of various statistical techniques at different stages of the organizational processes for performance improvement in Indian industries.

Each chapter in this thesis addresses the application of specific statistical techniques in diverse fields of industry and business. Chapter 1 provides basic concepts and review of literature. In Chapter 2, the application of Six Sigma methodology was studied. During this work, problems in various industries starting from manufacturing, engineering and wind energy to hospital processes were considered. The advantages and challenges in implementation of Six Sigma methodology in each type of industry was discussed in this chapter. It also includes the shortcomings of Six Sigma implementation. In the present work, an attempt was made to study the failures of Six Sigma implementation and identify specific improvement areas during implementation.

In Chapter 3, the application of Taguchi method was described. Two application areas of Taguchi method were explored here, one for designing a new product and another for improving existing processes. The advantages of using Taguchi's parameter design approach in product design were highlighted through two case studies. The process optimisation through Taguchi method for reducing the process problems also were

presented in this chapter. General problem solving in industrial scenario is discussed in Chapter 4. When organizations are not following any systematic methodology like Six Sigma and TQM, how a process related problem can be addressed is illustrated here. Few industrial problems of reducing rejection, rework and scrap in the processes were discussed under this chapter.

Chapter 5 deals with business forecasting problems generally faced by the industry. A study was conducted on how effectively the time series forecasting techniques can be applied to address the operational problems in industry. This was illustrated with the help of a time series data on monthly demand. Reliability modeling and analysis is discussed in Chapter 6. A study is being carried out on progressive type - I interval censoring scheme and the parameter estimates are obtained through various methods for lognormal distribution. Both classical and Bayesian approaches are adopted for the same.

**Keywords:** Auto correlation function, Bayes estimation, Beta correction, Business forecasting, Cause and effect diagram, Control chart, Design of experiments, EM algorithm, Lognormal distribution, Main effect plot, Maximum likelihood estimate, Measurement system analysis, Partial auto correlation function, Process capability, Progressive censoring, Regression analysis, Reliability, Robust design, Seasonal ARIMA, Signal-to-noise ratio, Simulation, Six sigma, Taguchi method, Value stream mapping, Variance inflation factor.

## *Acknowledgement*

---

*On completion of my Research work, with an overwhelming heart, I would like to register my gratitude to the persons and institutions which turned instrumental in augmenting my work by way of their whole hearted support and assistance.*

*First and foremost, I would like to express my sincere gratitude to my research guide and mentor, Dr. Johnny Scaria, Associate Professor, Department of Statistics, Nirmala College, Muvattupuzha for his incessant support, motivation, and encouragement throughout my research. I acknowledge the generous support he rendered, giving meticulous attention to all details concerned with the research and the preparation of the thesis. I remain in awe of his dynamic leadership that made things happen.*

*Let me also express my sincere thanks to Prof. Bimal Roy, Director, Indian Statistical Institute, Kolkata, Prof. Somnath Ray, the current Head and Prof. U. H. Acharya, former Head, SQC & OR Unit, Indian Statistical Institute, Bangalore for providing an excellent and inspiring academic ambience with all the facilities required to carry out and complete my research work smoothly.*

*I would like to put on record my gratitude to the Principal and Vice Principal of Nirmala College Muvattupuzha, also to the HOD and other faculty of the Department of Statistics, Nirmala College for extending their generous support in completing my research work successfully.*

*I would also like to thank Prof. Jiju Antony of University of Strathclyde, Glasgow, Dr. B. Pradhan of Indian Statistical Institute, Kolkata and my fellow research scholars for fruitful discussions, encouragement on various topics of research.*

*May I extend my sincere thanks to all the Industries that provided me with umpteen opportunities to work with live problems and sharing of data for detailed analysis.*

*With an enduring debt of gratitude, I remember the support and encouragement extended by my close family, friends and relatives. The abiding love and inspiration of my wife, father, mother and brothers gave me the impetus to scale through taxing times and of course my children bore all inconvenience caused by my pre-occupation with my research.*

*From the fullness of my heart, I also thank God, the Almighty for showering on me all grace to complete this work without major hitches.*

*I would like to extend my sincere thanks to all others who have helped me directly or indirectly in completing my research work successfully.*

**Gijo E.V.**
